**2. Determine the average cost rate.**

The average cost rate is determined by dividing the average number of employees by the average number of the working days. The average number of employees is the average number of the employees in the month, divided by 31.

Working days are the days the company works, excluding Saturdays.

1. Divide the number of days in the month by the number of days in the calendar. Add to the result again.
2. Multiply the result by the number of employees in the month.
3. Divide the result by the number of the working days in the month, and the result is the average cost rate.
4. Calculate the average cost rate for each month. Add the results and divide the result by the number of the working days in the month. Add to the result again. Multiply the result by the number of the working days in the month, and the result is the average cost rate.
5. Divide the result by the number of the working days in the month, and the result is the average cost rate.
6. Multiply the result by the number of the working days in the month, and the result is the average cost rate.

## EMR CONTROL BOARD

### 1 DESCRIPTION

Warning: Before working on this board in the control room, disconnecting components is required.

- 1. Verify the connections.
- 2. Make a differential impedance measurement before and after the board is connected to the system.
- 3. Before changing the board, check that the cables are properly terminated before changing boards.
- 4. Make the correct connections when working with a board cable with the board connected to the cable.
